G. AKASH ETL & DATA VALIDATION	BATCH 14	TEAM R. Pavithra G. Akash A. Manish M.V. Ashika Reddy
--	--------------------	--

ETL ROLE SNAPSHOT Data inspection · Cleaning · Feature preparation · Quality validation · EDA handoff	PRIMARY FOCUS Reliable, consistent and analysis-ready retail transaction data
---	---

MY CONTRIBUTION
In this project, I mainly worked on the ETL and data validation part. My responsibility was to prepare the raw retail data for analysis by checking its structure, data types, missing values, and duplicate transactions. I cleaned and standardized the required fields, converted dates into a proper format, and created analytical fields such as month, weekday, and discount brackets . I also validated business rules and revenue calculations to ensure the data was reliable. Finally, I prepared the cleaned dataset for EDA so that the team could confidently use it for further analysis and insights.

WHAT I LEARNED FROM MY TEAMMATES
I learned something useful from each of my teammates while working on this project. From Pavithra , I understood how analysis can be converted into clear business insights and recommendations. From Ashika , I learned how product-level analysis can provide more detail than simply looking at category totals. From Manish , I learned how weekday and monthly sales patterns can give additional meaning to the revenue numbers. Working together also helped me understand how different parts of an analysis can be combined into one clear story for a business audience.

MY APPROACH I treated data preparation as the quality checkpoint before visualization and business interpretation.	WHY IT MATTERED Consistent and validated data helped the team work from the same analytical foundation.	TEAM CONNECTION My ETL work supported the category, product, discount, and timing analyses completed by the team.
--	---	---

KEY TAKEAWAY This project helped me understand the importance of clean, validated data as the foundation for reliable analysis and business decisions.
